

PRE-PRESSED WHEEL HUB ASSEMBLY

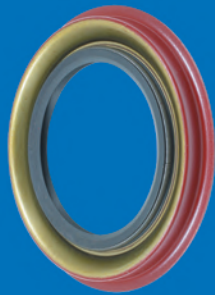

Traditional procedures of replacing a wheel bearing include steps that require using special equipment, such as a bearing press, to fully complete the job. WJB Automotive eliminates these steps entirely by offering a more efficient and easy-to-install solution in the form of Pre-pressed Wheel Hub Assemblies.

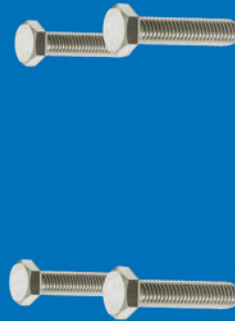

These specially designed assemblies have all necessary seals, bolts, c-clips, and other miscellaneous components already pre-installed into one singular unit, allowing the replacements of wheel hubs and bearings to be as simple as bolting off the original part and bolting on the new WJB assembly.

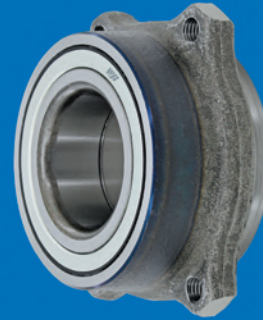

Wheel Hub Spindle

Wheel Seal

Mounting Bolts

Wheel Bearing
&
Mounting Flange

**Part shown is SPKT002; other part numbers may differ*

FEATURES & BENEFITS

- ❖ Bolt-on solution ready to be installed right out of the box without the need of specialized tools
- ❖ Complete assembly that integrates the wheel bearing, spindle hub, wheel seal(s), mounting flange, and mounting bolts all into one unit
- ❖ Eliminates the need to purchase each individual component separately
- ❖ Eliminates the risk of buying incorrect or incompatible parts
- ❖ Significantly reduces installation time by removing tedious steps required in traditional wheel hub and bearing replacement procedures
