

Universal Joint

Crafted from top-grade materials, such as hardened steel and precision-engineered alloys, universal joints are designed to endure the mechanical forces and stresses of the road. Their exceptional durability ensures reliable performance even in challenging conditions, contributing to the longevity of the drivetrain.

PRE universal joints are designed with ease of installation in mind, catering to both skilled mechanics and automotive enthusiasts. Their compatibility with a wide range of vehicles further reinforces their practicality, making them an essential choice for anyone seeking to optimize their vehicle's performance.

FEATURES & BENEFITS

- ❖ Increased strength & long-lasting durability using case-hardened steel construction
- ❖ Optimal grease retention with seals made of high-quality rubber
- ❖ All universal joints are pre-lubricated with premium, high-temperature grease
- ❖ Lubrication and servicing are made easy in greaseable universal joints through the use of zerk fittings
- ❖ Precise fitment is assured with precision-cut, machined outer mounting face

WHAT IS INCLUDED:

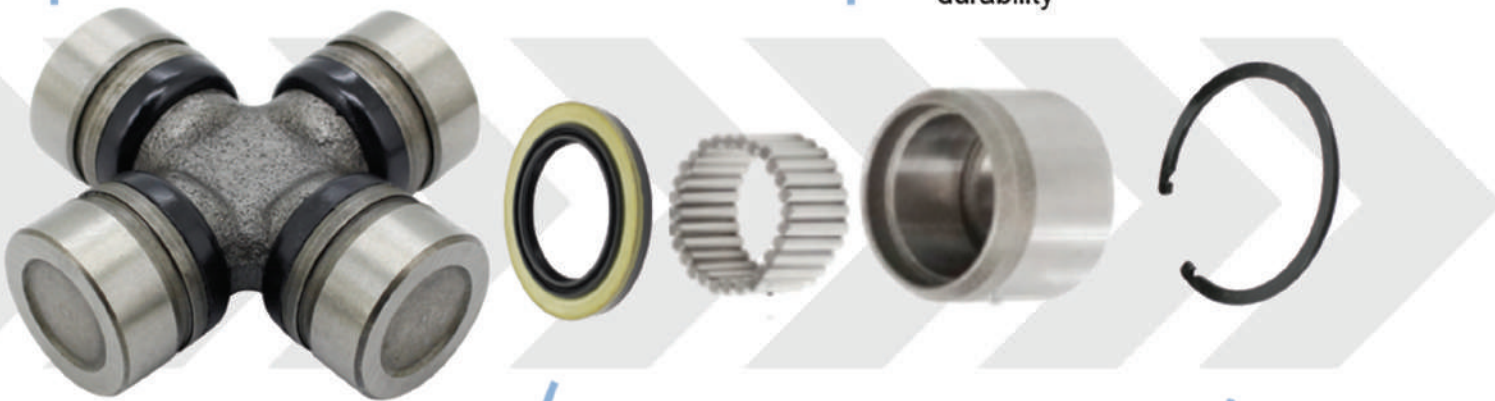

CROSS

- ❖ **Chrome-Molybdenum Steel:** is superior in strength, and enhances the durability for longer life expectancy.
- ❖ **Proprietary Protective Coating:** is a baked on multiple layered powder coating providing superior rust resistance and a non-porous surface.

NEEDLE BEARING

- ❖ **Pre-lubricated** using high-performance grease to ensure a longer life span
- ❖ Where applicable the encoder ring comes pre-installed in the bearing and is protected by seals
- ❖ **Manufactured** using advanced heat treatment processes for maximum durability

GREASE SEAL

- ❖ **Manufactured** from specialized rubber that can operate in extreme temperatures
- ❖ **Muti-lip seal design** maximizes dirt and contaminant exclusion
- ❖ **Dipped** in a flexible coat that strengthens metal-to-metal sealing

SNAP RING

- ❖ **Made** of high-grade steel that retains strength after being removed for maintenance
- ❖ **Locks** in the U joint and minimizes vibration

Precision universal joints are engineered to provide top tier performance of conjoining multiple rotating axles. All universal joints are designed using original equipment specifications to ensure the same proper fitment and loading tolerances as the original part. These U-joints will include any zerk fittings, c-clips, and other accessories needed for a complete and full installation.
